

# SEE THE DIFFERENCE FOR YOURSELF! IPD OFFERS CRYO-TREATED 3500 HEAD BOLT KITS

The response IPD received after launching the cryo-treated C15 head bolt kit (C15CHBKFR) has been so positive, that we are making cryogenic head bolt kits available for the 3500 engine applications (1310420-8FR).

What makes cryo-treating so special? Cryogenic heat treatment is a precisely engineered process of taking materials down to approximately -310° F, keeping them at that temperature in liquid nitrogen to remove residual stresses, and then ramping temperature back to room temperature, followed by a mild heat treatment process. The end result is a considerably longer life bolt with less internal stress and optimized tensile strength. IPD's cryo-treated 3500 head bolts are designed to ensure proper and even clamping forces across your cylinder head and reduce head bolt fatigue.

These parts are made in the USA and cryo-treated in the USA.  
All IPD Parts are subjected to our rigorous quality control and inspection process led by our in-house Quality Assurance team.

### 1310420-8FR – Cryo-Treated 3500 Head Bolt Kit contains:

- 8 of the 7N1961FR bolts
- 8 of the 1877738 washers

IPD cryo-treated head bolts do not require any extra torqueing – stretching does not occur! Each bolt is packaged in its own netting to prevent abrasions. Each cryo-treated head bolt has a blue dot on its head so that you know it's been cryo-treated.

If you are interested in purchasing IPD Cryo-treated 3500 head bolts, you can order through IPDNet at [store.ipdparts.com](http://store.ipdparts.com) or [eustore.ipdparts.com](http://eustore.ipdparts.com). You can also contact your IPD customer service representative or call 310-530-1900.
