FEBRUARY 2021 ISSUE

NEW IPD PRODUCTS

IPD Now Offers PLG4815615 Cuffed Piston and Liner Group for Select D3500

IPD is excited to announce the addition of this new PLG4815615 piston and liner group. This anti-polishing ring/liner provides increased durability and reliability while reducing carbon packing and liner wear. For use in select off-highway applications such as 776D, 777D, 784C, 785B, 789C, 793C, 992G, 994 and Gen Sets.

Introducing IPD's 1727764 Water Pump for G3304 & G3306 Engines

IPD's in-house engineering team spent months developing our own 1727764 water pump for G3304 & G3306. Each pump is inspected by IPD's quality assurance team - they even come with a signed tag so that you know it's been tested for leakage, pressure and flow. In addition to the improved quality components, the mounting gaskets/seals are included. IPD's innovative packaging ensures these new (not reman) pumps arrive in perfect condition.

The C11 Completes IPD's C-Series Lineup!

IPD now has the PLG3398176 piston and liner group for C11 engines. The kit includes an IPD-

designed "bushingless" welded steel piston (17:1 CR), with the latest advanced pin bore geometry (17:1 CR) for popular 725 and 730 articulated trucks, 966H loaders and 14M motor graders.

Innovative Raised-Edge Liner for 3400 & C15 Engines

IPD is always looking for ways to improve engine performance and engine life. Our latest innovation is the 1599778CSSPWS liner kit that features a "raised edge" liner on the outer top surface of the liner flange. The edge embeds into the graphite material of the head gasket. This additional clamping force secures the gasket more firmly in place and provides greater support to the fire ring assembly of the gasket. This liner also features IPD's unique crevice seal design that reduces liner movement in the 3400 and C15 engines.

February New Product Listings

These new products listed above are just a few of IPD's latest product launches. To review the entire list of new products we have available, please [click here](#).

IPD INNOVATIONS

IPD Takes Measures to Ensure Authentic, Genuine Parts

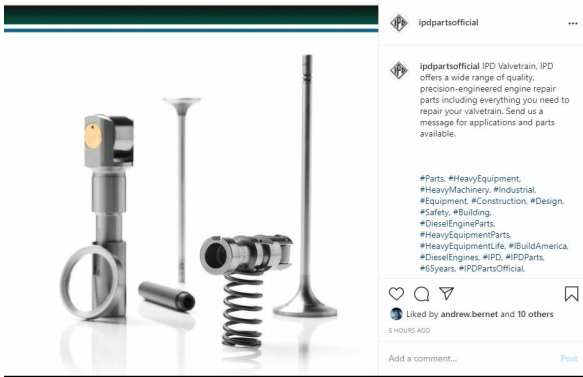

Are those real? Very soon you can expect to see something shiny and new on your next IPD package. In upcoming weeks all IPD products will have a label will have a unique hologram that will confirm authenticity of your IPD products.

TECHNICAL CORNER

"Piston Designs - So many designs, so little time..."

Piston designs have changed in recent years and the piston you take out of your engine may look different from the one you need to replace it with. Check out [Engine Professional magazine's Jan-Mar 2021 issue](#) to read Steve Scott's, IPD's Director of Product Development, article on the four major piston designs: aluminum, articulated, one-piece steel and two-piece friction-welded steel so that you can learn their unique differences.

Are You Following IPD?

Don't miss out on a single product announcement, IPD innovation, or the latest news and technical tips. Get to know the sales and service teams, check out the latest IPD gear or see what goes on behind the scenes.
